

# MATHS BOOK PLUS

Age 7-15 years

**Strengthen skills in the Four Rules of Number while keeping track of work done.**

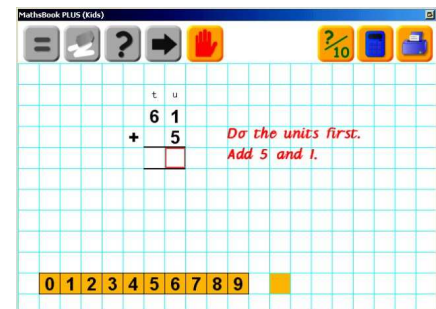

Maths learners need to spend a great deal of time rehearsing written methods of addition, subtraction, multiplication and division, but it's not always easy to monitor their work or techniques. MathsBook helps by providing regular, closely-controlled practice on screens that look like workbooks, automatically moving learners between difficulty and help levels according to performance.

MathsBook enables children to work through a series of addition and subtraction sums. These range from adding a one-digit number to a two-digit number, right through to working with three digit decimal fractions. MathsBook allows children to work at a level appropriate to them, work to a time limit, print out results from each session and print out a worksheet for the children to continue practicing on at a later date. The software is easily accessible and is very user-friendly, with the children understanding how to use it after a short time. The tools are self-explanatory with clear explanations. Children have immediate feedback as to whether a sum is correct, or not and MathsBook gives pointers as to where mistakes have been made.

There is no need to write follow-up work sheets, as the software does this - and much more - for you!

MathsBook is also ideal for interactive whiteboard demonstrations targeting key skills such as decomposition and carrying.

- Gives optional talking help, useful for pupils with special needs
- When mistakes are made, MathsBook works out what they did wrong
- Flexible options provide targeted practise for different pupils

## Reviews and quotes

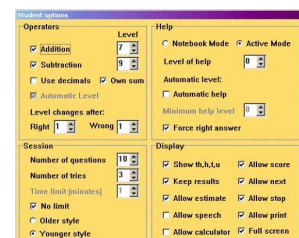

"Children who found the concepts of addition and subtraction difficult and those for whom the formation of numbers presents a problem, worked well on MathsBook as they didn't have to think about the writing of numbers." - TEEM

## Supplied with

- Handbook
- Sample worksheet

## System requirements

Windows - 95, 98, ME, NT4, 2000, XP, Vista  
Mac
