

Ages 6-14 years

Build confidence in handling and recording money in simulated real-life situations.

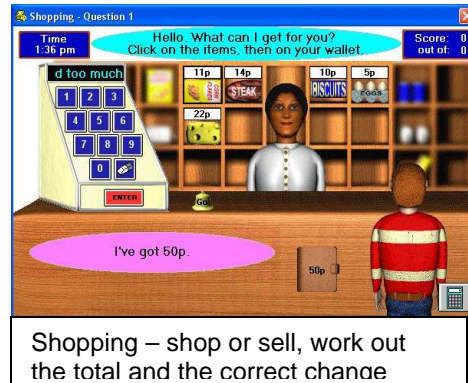

Handling and recording money is difficult to teach. Pupils need lots of practice, and this is exactly what MoneyTalks! provides. In four simulated settings - At the Checkout, Shopping, Eating Out and Loot - it gets them working with the language of money, whilst consolidating basic number skills. A range of pre-set files linked to the Numeracy Strategy, attractive displays and easy customisation match MoneyTalks! to primary and lower secondary. Costs, totals, number of items bought or sold, currency, plus the level of on-screen help available, are just some of the variables which can be changed. It can even be set up as a test for assessing skills and identifying weaknesses.

MoneyTalks! is ideal for both individuals and for group demonstrations using interactive whiteboards. It keeps track of work done and will print an unlimited number of randomised worksheets at whatever difficulty level you want!

*Works with £s, Euros & \$ currencies!

Supplied with

- ❖ Handbook
- ❖ MoneyTalks! in the Classroom book
- ❖ Work sheet examples
- ❖ Question sheet examples

Reviews and quotes

"This is an excellent resource ... children can access real life problems at many different levels." – TEEM

"MoneyTalks! was used in my Numeracy Hour for 40 minutes at a time, over four days. Children of different abilities had the chance to use the software and it matched the learning objective, which was to solve real life problems involving number. The children had the chance to try out all four activities on the CD and then printed out their answer sheets. They were highly motivated by the sheets with ticks showing where they had been successful." – TEEM

System requirements

- ❖ Windows 95, 98, ME, NT4, 2000, XP, Vista
- ❖ Mouse or keyboard
- ❖ Works with switches
