

## Scally's World: Numbers & Sums

*Entertaining and rewarding number-based games for young learners.*

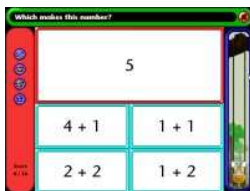

**Scally's World: Numbers & Sums** provides a range of learning and consolidation activities, at relevant difficulty levels, such as counting sets of objects, recognising numerals and number names, adding, subtracting, working with coins and weights. Basic ICT skills (keyboard/mouse control) are also developed.

Across 17 activities, all possible skill combinations are provided on a variety of grid sizes to encourage pupils to spot number pairs or find hidden ones, match number names to numerals, match numerals to sets, count objects and even do simple addition and/or subtraction 'sums' with two or three (similar or different) operators. This is just the sort of practice many pupils need – and by selecting one of the pre-set profiles e.g. Year 1 – Term 2, the software automatically targets the activities at just the right level.

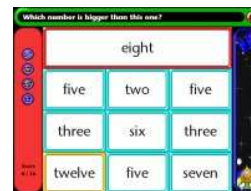

Ideal for whole-class demonstrations and collaborative small-group interaction using a whiteboard, and easily integrated into traditional classroom teaching, Scally's World: Numbers and Sums can speak numerals, names and operators (with real British voices), and pupils can even pick a theme they like best e.g. Space, Ocean or Jungle.

With optional animations for correct answers, children are guaranteed to be entertained and stay focused!

Numbers can be in the ranges 0-5, 1-5, 0-10, 1-10, 0-12, 1-12 and the program will even work with answers up to 20 if required.

Which sum makes this number?

Which number is bigger than this one?

**Review:** “The program enhances and extends children's early Numeracy skills in an interactive way, closely linked to many of the core objectives for number, in Reception and Year 1. This is a good quality product, featuring a vast variety of teacher controls making the program suitable for all abilities”.

**Ages:** 3 to 7
