

Clicker

Changing the way children write!

Clicker is the best-selling supportive writing tool, used in thousands of schools worldwide with children of all ages and abilities. Winner of 5 BETT Awards, Clicker combines a child-friendly talking word processor with the unique Clicker Grids, making it an incredibly powerful literacy tool.

Children can write with whole words, phrases or pictures by clicking on cells in a 'grid'. Grids can be linked so that pupils can move through them in a sequence, offering scaffolding through written tasks and access to an unlimited number of words or pictures. Reluctant or struggling writers really achieve success as they write in a way that they have never done before.

Words in the grid can be spoken with a right-click, enabling the pupil to hear a word before writing it. Sentences in the word processor are read aloud automatically as they are completed with a full stop. The child's writing can be printed out or saved in HTML format, so that children can publish their work on the school website.

Clicker Grids are amazingly easy to create - use words from reading books or the current

topic in your classroom. Lots of ready-made grids are included with the program, and hundreds more can be downloaded **free** from LearningGrids.com.

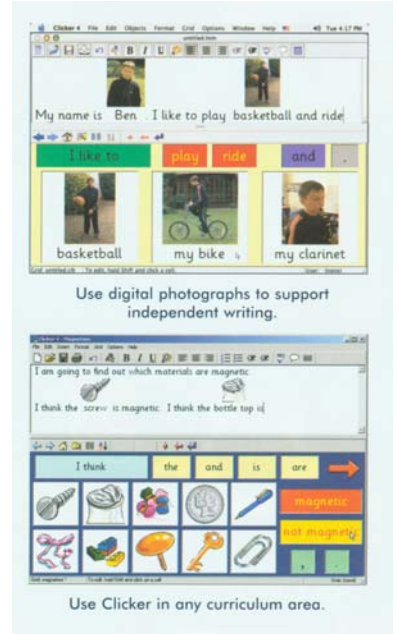

Clicker is also a powerful tool for creating multimedia presentations that can be enhanced with digital photographs, sound and video. For example, children can make simple talking books, produce a multimedia guide to the school or create collaborative on-screen presentations.

Graphics

Clicker comes with a graphic library of **over 1000** pictures, and it's easy to use your own images - all the main graphic formats are supported, including digital photos.

Special needs

Clicker is great for writers of all abilities, including reluctant writers and pupils with English as a second language.

Use Clicker For:

Sentence building

Words can be organised left to right and colour-coded to help students to build simple sentences. To listen to a word in the grid, just point to it and right-click (or Control-click on Mac). Then a left-click sends the word into Clicker Writer.

Word banks

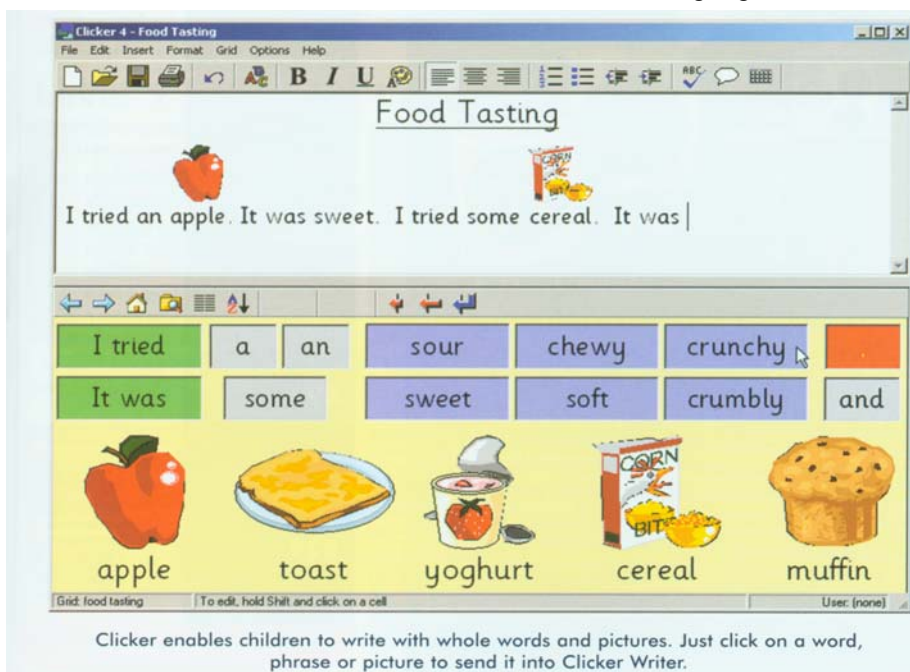

Pupils can use Clicker Writer like any other word processor. Type from the keyboard but use the Clicker Grids for more difficult words or to extend vocabulary.

Writing frames

Grids can be linked so that students can move through them in a sequence, offering a 'writing frame' or 'story frame' to help structure a piece of writing.

Multimedia

You can create Clicker Grids that work on their own, without Clicker Writer, making them more like pages of digital books. This enables students to create multimedia presentations with digital photos and **video**.
