

Inspiration

The Premier Tool for Developing Ideas and Organising Thinking

Using the proven power of visual learning, Inspiration[®] helps students strengthen critical thinking, comprehension and writing skills across the curriculum. Students build graphic organisers to represent concepts and relationships and use the integrated outlining capability to further organize ideas for reports.

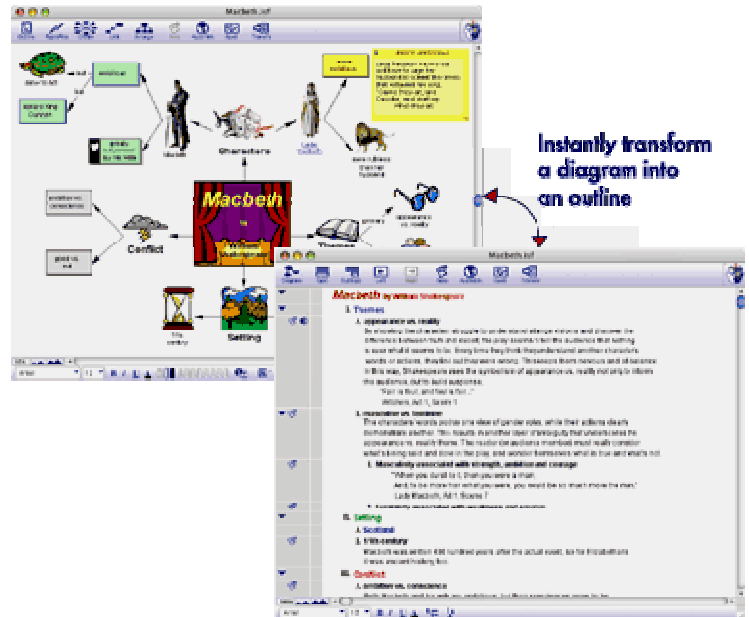

Inspiration is a visual tool for developing ideas. It is especially designed for thinking in real-time on the computer. The Inspiration Diagram view can be used to generate ideas, plans and diagrams.

Inspiration is a mapping program which builds a visual map of ideas using pictures, colours, shapes and relationships.

You can build pictures on screen and then with a single key stroke, convert your image into a linear outline. You can also use your own pictures and change background colours, fonts and sizes to suit your own needs.

Inspiration gives students and educators broader and deeper ways to explore, organise and develop ideas. Features include:

- Visually integrated notes
- Enhanced hyperlinking
- Audio capabilities
- Multiple main ideas
- Inviting, intuitive interface
- Simplified template integration
- Rapid web site creation
- Support of emerging classroom technologies, including
 - Interactive whiteboards
 - Palm-Powered™ handhelds, such as the Dana

Inspiration is suitable for students aged 10 years to adults. It is available for both Windows and Macintosh operating environments.
