

Spark-Space in Education

Spark-Space bridges the gap between ideas and the production of a structured piece of writing. It is for students with a conceptual learning style such as those with hidden disabilities like dyslexia. Spark-Space allows students to structure their thoughts at speed and then turn those ideas into a structured document in one program. Its simple to use style allows an idea map or document to be created in minutes.

Spark-Space enables students to see relationships between ideas through its unique 3D view, thus accelerating learning and understanding. Independent working is also encouraged as built in text- to-speech allows them to review and correct their own work. Spark-Space transforms the learning landscape for the LD Learner!

Spark-Space in Education comes in three different editions:

Spark Educator for the Teacher - Spark Educator captures all learning styles in the class and accelerates learning by presenting a lesson in conceptual and sequential format. Spark-Space's unique 3D view allows students to prioritise and maintain concentration.

Spark Educator is a teaching tool that works with a white board allowing all learning styles and ability levels in a classroom to learn together.

Teachers, building in templates and animated tutorials to allow mastery in minutes, have designed Spark Educator for simple, uncomplicated use. Spark-Space is fast becoming a classroom standard harnessing the potential of all learners and accelerating learning.

Everyone learns -Spark-Space allows lessons to be presented in a way that captures all learning styles through its idea map and writing presentation style.

Lessons online- Lessons can be published on the web in only 4 clicks to promote home study.

Accelerated learning- Lessons are presented in a unique 3D way that aids a student's understanding of the "Big Picture".

Students can self-study. Spark-Space has built-in "text to speech" which allows independent study and self-review of lessons.

Simplicity - Spark-Space can be used by anyone within minutes as it has been designed and developed by teaching professionals.

Spark Learner helps the student to understand concepts, organise ideas and produce a finished, structured document. Spark-Space allows the student to learn independently or self-check work through its built in Text-to-Speech feature. Spark Learner is also an extremely useful tool for those with hidden disabilities such as dyslexia, often radically improving the learning process.

KidSpark is a simplified version of the program for children.

- **Children learn to turn ideas into writing** Spark-Space turns idea maps into complete text documents with one click.
- **Kids organize with pictures** Spark-Space allows kids to self-organize with pictures.
- **Complete Multi Sensory** Spark-Space has built-in 'text to speech' function.
- **Understand relationships** Spark's unique 3D viewer allows the child to use perspective to understand abstract relationships
- **Have fun!** Comes with a funky 'bubble' theme - the program just looks as much fun to use as it is!
